diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 repressent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents a tomato RNA-directed RNA polymerase (RdRP) peptide sequence used to create a degenerate nucleotide sequence and degenerate PCR primers used to amplify the RdRP cDNA sequence of the invention. The invention comprises the nucleic acid and protein sequences of RdRP, the protein of the invention can catalyse in vitro transcription of short single stranded RNA into DNA molecules, this transcription can be either primed by RNA or DNA oligonucleotides or be unprimed. The protein may have cytostatic or virucide activities. The sequences of the invention may be used in gene therapy or as an RNA directed RNA synthesis inhibitor. The RdRP cDNA sequence and a template
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid molecule encoding a polypeptide having the enzymatic activity of RNA-directed RNA polymerase, for modulating gene expression and treating cancer and virus infection in human and animals -
                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                 Tomato, RGRP, RNA-directed RNA polymerase, in vitro transcription, vivostatic, virucide, RNA synthesia inhibitor; antibody, immunogen, transgenic animal; cancer; viral infection; immunoprecipitation; immunolocalisation; 130 kDa-15; gene therapy.
                                                                                                                                                                                                                                                                                                                                         Tomato RNA-directed RNA polymerase (RdRP) 130 kDa-15 AS sequence.

```
a disease are useful for treating a disease caused by the undestred expression or overexpression of a nucleic acid molecule in a human, rat or prouse, by administering the molecules. This system can be used in the preparation of a pharmaceutical composition and for inhibiting capression of any desired gene by transferring the RGRP system to cryanisms that either lack a comparable mechanism or do not sufficiently expression of any desired gene by transferring the RGRP system to protein are useful for inhibiting RNA directed RNA synthesis and for protein are useful for inhibiting RNA directed RNA synthesis and for protein are useful for inhibiting RNA directed RNA synthesis and for protein are useful for probes and/or for the control of gene expression, as primers for amplification of nucleic acid molecules and as the standard of expression of the cDNA molecules and additionally, nucleotide and protein sequences are useful for suppression of undesired gene expression in humans and animals and the antibody is useful for in humans and animals and the antibody is useful for immunoprecipitation or immunolocalisation of the protein, identification immunoprecipitation or immunolocalisation of the protein, identification or immunolocalisation of the protein identification or immunolocalisation of the protein identification or immunolocalisation of the protein identification in the control of the protein identification or immunolocalisation identification in the control of the protein identification o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
nucleic acid molecule derived from a nucleic acid molecule which causes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; foetal liver; gene expression; single exon nucleic acid probe.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of
                                                                                                                                                                                                                                                                                         Human brain expressed single exon probe encoded protein SEQ ID NO: 36120.
         fetal liver. The present sequence is a pertide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide #10981 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tomato; gene therapy; RNA-directed RNA polymerase; RdRP; gene expression; transgenic plant; tissue culture; plant breeding; therapy; C-protein.
                                                                                                                                                                                                                                                                                                The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of

The present sequence is a peptide encoded by an oligonucleotide which is used to design RNA-directed RNA polymerase (RGRP)-specific PCR primers. Hases PCR primers are used to amplify a cDNA encoding tomato C-protein having RdRP activity. The peptide is obtained by micro-sequencing RdRP protein is capable of RNA-directed RNA synthesis, thus using RNA as a template for synthesising complementary RNA modecules. RGRP nucleic acid is useful for modulating gene expression in plants, humans and animals. This may lead to various physiological, developmental and/or morphological changes. Transgenic plants containing RdRP nucleic acid is especially useful in plant cell or tissue cultures and in plant breeding. RdRP is useful in gene therapy, particularly for treating a disease that is caused by the undestrable expression or overexpression of a gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid molecules encoding polypeptides with RNA-directed RNA polymerase enzymatic activity, useful in modulating gene expression in plants, humans and animals, as well as in plant cell/tissue cultures or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                     Human brain expressed single exon probe encoded protein SEQ ID NO: 37583.
                                                                                                                       The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                   Gaps

ö
                                                           probes which are derived from genomic sequences expressed in the human brain. They can be used from genomic sequences expressed in the human which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimær's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs and be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Peptide #8452 encoded by probe for measuring cervical gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             human; microarray; gene expression; cervical epithelial cell;
                                                        present invention provides a number of single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                            ó

                                                                                                                                                                                                                                                                        This sequence represents a fragment of human chromogranins A (CgA). The invention relates to an antibody having a reactivity specific to human CgA, which is prepared by immunising a warm-blooded animal, other than human, using this peptide. The antibody is useful in a method for detecting and/or measuring human CgA. The method can measure and detect human CgA with a high sensitivity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents a fragment of human chromogranins A (CgA). The invention relates to an antibody having a reactivity specific to human CgA, which is prepared by immunising a warm-blooded animal, other than human, using this peptide. The antibody is useful in a method for detecting and/or measuring human CgA. The method can measure and detect human CgA with a high sensitivity.

                                                                                                                                                                                                                                                    buman secreted proteins are useful for preventing ameliorating out the genes and proteins are useful for preventing, ameliorating or treating medical conditions, e.g. by protein or gene therapy. The genes are useful for preventing, ameliorating or treating medical conditions, e.g. by protein or gene therapy. The genes are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and covarian cancer, and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune through arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral canoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes polynucleotides, such as complete cDNA sequences and/or sequences of genomic DNA encompassing complete genes, portions of genes, and/or intergenic regions, collectively referred to as sequence-determined DNA fragments (SDFs), from corn plants and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Plant, corn, Arabidopsis thaliana; sequence-determined DNA fragment; SDF; genetic mapping; identification; promoter; structural gene; UTR; untranslated region; expression control.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

```
CC Arabidopsis thaliana. The SDFs are promoters, structural genes, contranslated regions (UTRs), or 3, termination sequences. They can be used for expressing gene product and controlling expression of a crarget gene, either as a promoter, a structural gene, an UTR or as a consider a squence. They are also useful as tools for genetic constering a group pf plants with a common trait. AAA78433 to AAA78630 con and AAA24605 to AAB25099 represent the specifically claimed considered and polypeptides encoded by them given in the conservation.

Patent No. 6218142
GENERAL INFORMATION:
APPLICANT: Wasseneger, Michael
APPLICANT: Riedel, Leonhard
APPLICANT: Schebel, Winfried
APPLICANT: Sanger, Heinz
TITLE OF INVENTION: NUCLEIC ACID MOLE
TITLE OF INVENTION: PRA-DIRESTED RNA
NUMBER OF SEQUENCES: 13
CORRESPONDENCE ADDRESS:
ADDRESSE: FISH & NEAVE
STREET: 1251 Avenue of the Amarican
                                                                                                                                                                                                                                                                                          SSEE: FISH & NEAVE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 4, Application US/09529245

Sequence 4, Application US/09529245

Patent No. 6448078

GENERAL INFORMATION:

APPLICANT: Weiner, David B

APPLICANT: Mahalingam, Sundarasamy
APPLICANT: Patel, Manata

TITLE OF INVENTION: Cellular Receptor For HIV-1 VPR Essential for G2/M

TITLE OF INVENTION: Phase Transition of the Cell Cycle

TITLE OF INVENTION: Phase Transition of the Cell Cycle

CURRENT APPLICATION NUMBER: US/09/529,245

CURRENT FILING DATE: 1998-10-09

PRIOR PAPLING DATE: 1998-10-10

NUMBER OF SEQ ID NOS: 4

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 4

LENGTH: 341
APPLICANT: Patel, Mamata

TITLE OF INVENTION: Cellular Receptor For HIV-1 VPR Essential for G2/M

TITLE OF INVENTION: Dead of the Cell Cycle

FILE REFERENCE: UPAPO376

CURRENT APPLICATION NUMBER: US/09/529,245

CURRENT APPLICATION NUMBER: US/09/529,245

PRIOR APPLICATION NUMBER: US/09/529,202

PRIOR PILING DATE: 1997-10-10

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 2

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER LIBM PC COMPATIBLE

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARR: Patentin Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/791,115B

FILING DATE: 30-JAN-1997

CLASSIFICATION:

NAME: INFORMATION:

REGISTRATION NUMBER: 2318-134.A

TELEPHONE: 202-683-7031

INFORMATION FOR SEQ ID NO: 27:

SEQUENCE CHARACTERISTICS:

LENGTH: 394 amino acids

TYPE: amino acid

TOPOLOGY: linear

MOLECULE TYPE: protein

Sequence 29, Application US/09143571

Sequence 29, Application US/09143571

Patent No. 6333153

GENERAL INFORMATION:

APPLICANT: GRADIA, SCOTT

APPLICANT: GRADIA, SCOTT

APPLICANT: GRADIA, SCOTT

TITLE OF INVENTION: COMPOSITIONS, KITS, AND METHODS FOR EFFECTING ADENINE

TITLE OF INVENTION: PROTEINS

FILE REFERENCE: 9885-601

CURRENT APPLICATION NUMBER: 60/093,935

EARLIER FILING DATE: 1998-09-28

EARLIER PILING DATE: 1997-11-28

EARLIER PRILING DATE: 1997-11-28

NUMBER OF SEQ ID NOS: 36

SEQ ID NO 29

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match 0.6%; SC Best Local Similarity 100.0%; P Matches 7; Conservative 0;

Fruit were harvested at the breaker stage (first sign of lycopene accumulation on the blossom end of fruit). Fruit were cut in half and the seeds and locules were discarded prior to freezing the pericarp."

Anote—"Vector: pBluescript SK(-); Site_1: EcoRI; Site_2: XhoI; Various sizes of sprouting eyes (2mm to 15mm) were taken from tubers. The tubers were incubated at 26c in the dark for 2-3 weeks prior to sprouting. The eyes were frozen in liquid nitrogen immediately upon removal from

This library was made from sections of dormant tuber. avoiding the buds and epidermis. Tubers were stored for one month post-harvest at 4oC. The tuber was peeled, well away from the surface. Then it was chopped into 1-2 mm cubes and immediately frozen in liquid nitrogen. This library is noted as P4 in Tanksley lab notebooks."

/note="Wector: pBlueScript SK(-); Site_1: EcoRl; Site_2:
Xhol; NRA was supplied by Christian Bachem & Beatrix
Horvath(Laboratory of plant Breeding, Dept. of Plant
Sciences, Wageningen University, The Netherlands). Total
RNA was isolated from developing axillary buds of potato
nodal stem cuttings cultured on medium for the
introduction of tuber formation as described in Bachem et
al. (plant Journal 1996). Tissue samples were taken of
stages or cresponding to growing stolons and the early
stages of tuber formation.
